## CHINESE MAN NUMBERS AND PROBABILITY OF THE GIFTED

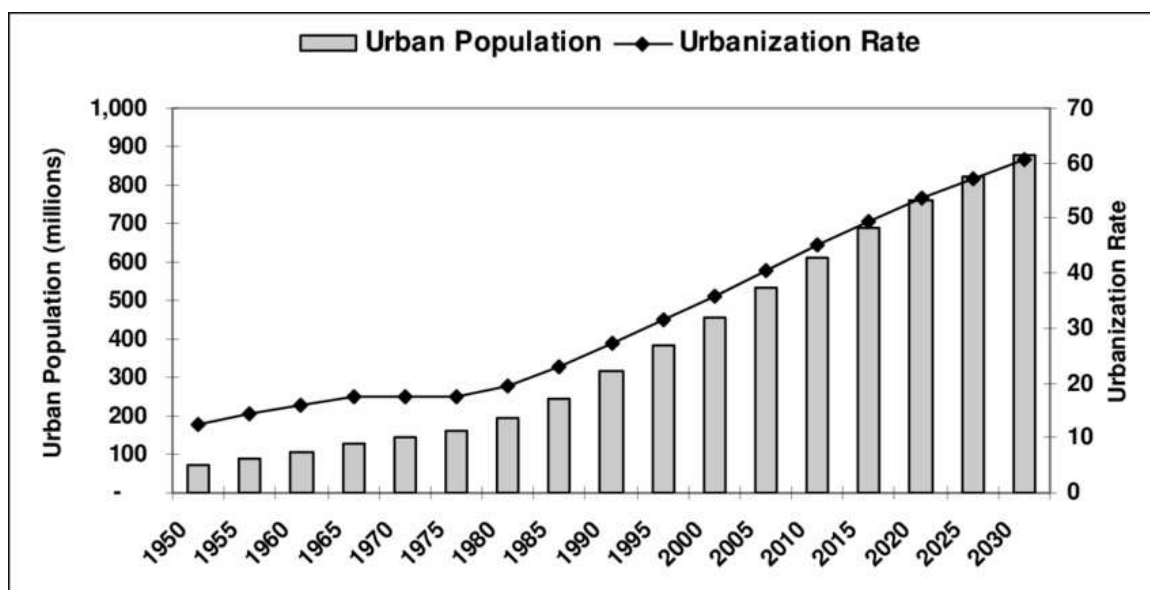

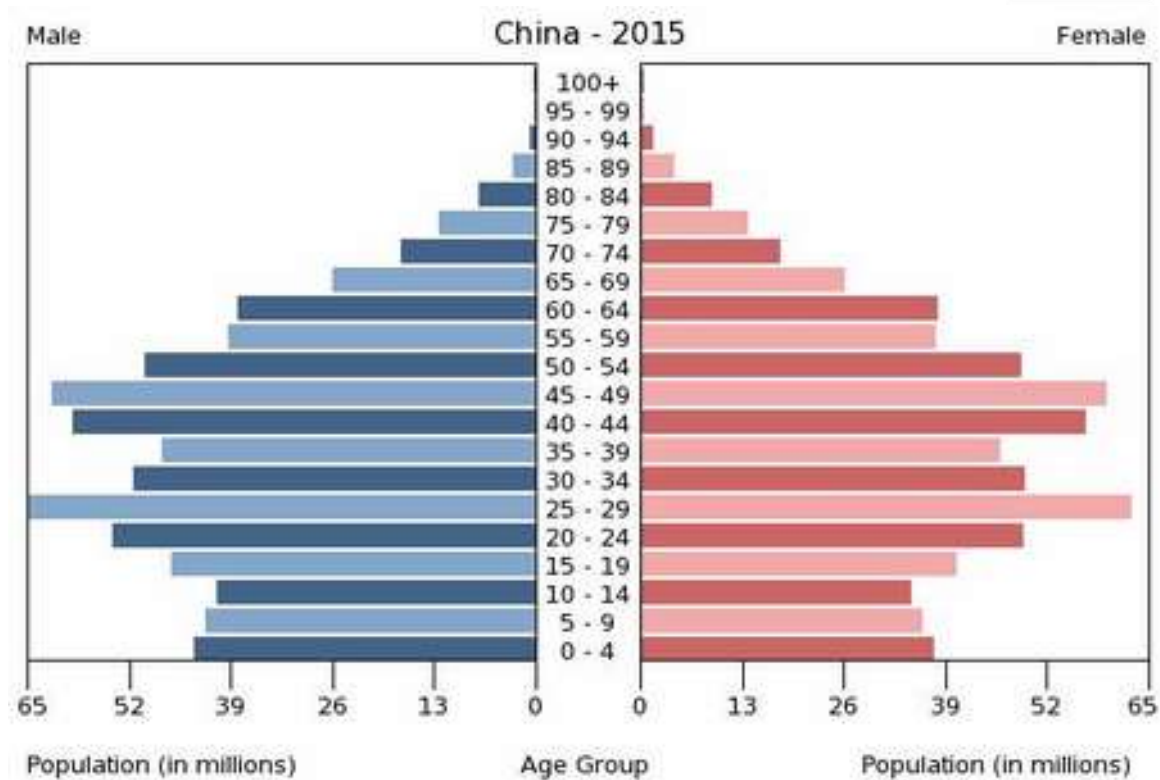

China is a 1430 Million strong probability distribution with chinese characteristics. This means that China can be structured in any way that makes sense: if you are looking for the top 1% of bright and gifted you still end up with 14.3 million individuals. If you are looking for people with ashberger syndrome you can still find hundreds if not thousands. If you are looking for purity, loyalty, and relaiability am sure you can fund that too. [REDACTED]

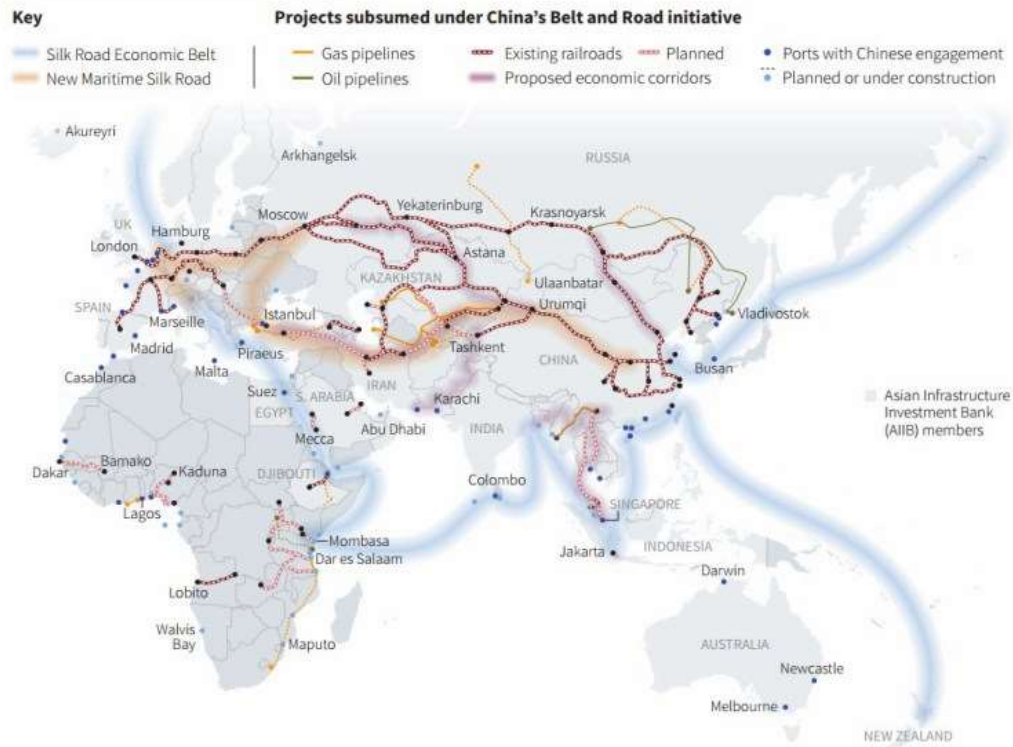

## URBANISATION OF CHINA

6% OF POPULATION - 94% POPULATION

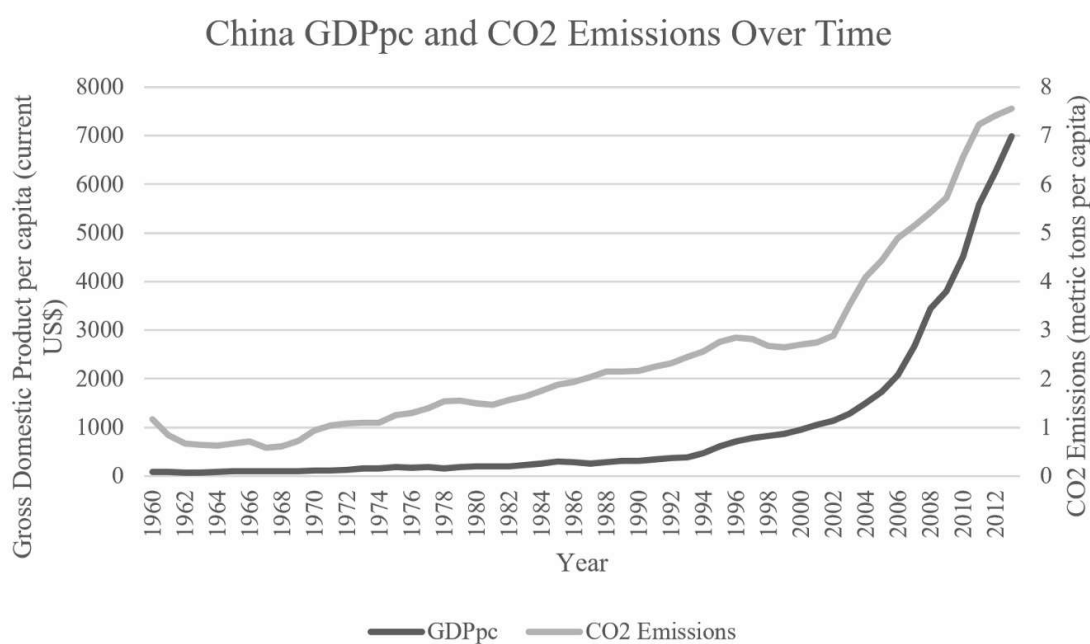

China has been very friendly with African countries, has a great understanding of the situation there: the infrastructure bank builds human and money holding mechanisms for given countries elites that make them less of a target and more of an asset.
