

# DOCTRINE OF THE ECO BOLSEVIK / VD

STEP BY STEP TOWARDS DIGNITY AND ABUNDANCE

---

## Peace for 300 Years

A vision of *Eco-Bolshevik revolution of the mind* —  
where each soul, liberated from illusion,  
truly calculates who they are,  
what they have loved in their lifetime,  
and what is genuinely needed for a happy, meaningful life.

Not just for one, but for *all citizens of Earth*.

As we arrive at this vast collective of peaceful memories and conscious actions,  
we reorganize the planet in alignment —  
with nature, with justice, with truth.

This is the era of *the Eco-Bolshevik*.

Not of war, but of awakening.

Not of conquest, but of clarity.

A revolution that reshapes the world through deep reflection and collective peace.

---

---

## Doctrine of Everydayism

*Based on the Pie-to-Population Ratio and the Eco-Bolshevik Vision*

### 1. Foundational Calculation: The Pie is Abundant

Let us begin with the core equation:

- **Global GDP (The Pie):** \$100 trillion
- **Global Population:** 8.2 billion people
- **Shared Abundance Model:**  $\text{GDP} \div \text{Population} \div 2 = \text{Sustainable Wealth for All}$

$\frac{100,000,000,000,000}{8,200,000,000 \div 2} \approx \$24,390$  per person annually

This figure represents a **baseline of dignified, abundant living** — when the planet's wealth is fairly and wisely distributed. It doesn't assume scarcity, but an **enlightened reallocation** of effort, energy, and empathy.

---

### 2. The Principle of Harmonious Living

Everydayism rejects endless accumulation and promotes:

- **Daily joy through contribution, not consumption**
- **Living by rhythms of nature, not profit clocks**
- **A culture of enough, not excess**

This balance sustains not only life, but its **beauty and meaning**.

---

### 3. Eco-Bolshevik Economics

This revolution is *not violent*, but *radically rational*.

It calculates need. It honors dreams. It distributes resources **according to human dignity and ecological balance**.

- No billionaires, no beggars — only balanced lives.
- Local food, universal care, collective memory.
- Technology serving simplicity, not addiction.

---

### 4. Memory as Governance

Decisions are made not from power, but from **accumulated peaceful memory** —

We govern by remembering:

- What made us feel free
- What truly connected us
- What preserved our home, the Earth

This is the **politics of wisdom**, not whim.

---

### 5. Implementation Path

- Reorganize economies around *wellbeing-to-output* ratios
- Educate children in planetary math and emotional ecology
- Replace GDP obsession with **Genuine Collective Joy Index (GCJI)**
- Mandate periodic **global recalculation** — to keep humanity aligned with reality and peace

---

### Conclusion: The Era of Enough Has Come

In the age of Beke 300, *peace is not passive*. It is active calculation, radical honesty, and shared joy.

Everydayism is the doctrine that guides this — not as a utopia, but as a rational, achievable framework.

---

Here is a foundational **doctrine on “Stepping Stone Democracy”**, designed as a realistic, phased approach to collective power and planetary well-being. It blends elements of participatory politics, transitional economics, and deeply intentional governance.

---

## Doctrine of Stepping Stone Democracy

*A Phased Path to Collective Power, Ecological Balance, and Everyday Freedom*

---

### 1. Core Principle: Evolution Over Explosion

Stepping Stone Democracy is not revolution through chaos — it is *revolution through sequence*.

It recognizes that **people, systems, and cultures** require transition.

Each step is a *stone across the river* —

- Toward justice
- Toward ecological harmony
- Toward collective dignity

It does not promise utopia overnight.

It promises *direction, momentum, and clarity*.

---

### 2. The Stepping Stones

Each “stone” is a democratic milestone — small enough to stand on, big enough to matter:

#### Step 1: Participatory Transparency

- Open-source government budgeting
- Citizen panels on all major municipal decisions
- AI-assisted public understanding of policy consequences

#### Step 2: Democratic Economy

- Worker-owned cooperatives and community banks

- Universal basic services (health, shelter, food security)
- Regenerative labor laws prioritizing rest, meaning, and creativity

### **Step 3: Ecological Accountability**

- National carbon budgets allocated democratically
- Localized food, water, and energy systems with public oversight
- Nature given legal personhood, represented in parliaments

### **Step 4: Memory-Based Governance**

- Intergenerational councils (elders, youth, historians, ecologists)
- Cultural preservation as a civic duty
- Long-term thinking encoded into constitutional updates

### **Step 5: Global Planetary Assembly**

- A citizen-led, post-nation-state assembly to oversee planetary issues
- Equal voice by region, not GDP
- Decisions implemented via binding digital referenda

---

## **3. Role of the Citizen: From Subject to Steward**

Stepping Stone Democracy elevates the citizen to a **steward of their environment, economy, and future**.

Participation becomes daily, not episodic.

Voting is just one expression — others include:

- Collective dreaming sessions
- Resource-sharing economies
- Local innovation incubators
- Neighborhood memory archives

---

#### 4. Safeguards Against Regression

To prevent backsliding into oligarchy, violence, or extractivism:

- Transparent algorithms with human oversight
- Anti-concentration laws on data, wealth, and land
- “Right to Recalculate” laws: periodic audits of justice, equity, and wellbeing metrics

---

#### 5. Final Vision: A Dynamic Peace

Stepping Stone Democracy does not arrive at a single destination.

It is a *perpetual unfolding* of a more honest, humane way of organizing ourselves.

**It is a democracy that never declares itself done.**

It grows with us — adapting, healing, and remembering.

---

#### Slogan:

“Not one leap — many stones. Walk them together.”

---

Great choice — here's a concise and structured **Policy White Paper** for the **Stepping Stone Economy**, designed to be taken seriously by policymakers, community leaders, and organizations seeking a pragmatic roadmap toward equitable and regenerative economic reform.

---

## Policy White Paper

### The Stepping Stone Economy: A Transitional Framework for Regenerative and Equitable Prosperity

**Date:** April 2025

**Prepared by:** [Your Organization or Name]

#### **Executive Summary:**

This white paper proposes the **Stepping Stone Economy**, a phased economic transition framework designed to address systemic inequality, ecological degradation, and social alienation in a practical, politically viable, and morally urgent manner. Grounded in economic realism, ethical clarity, and environmental responsibility, it outlines five core “stones” — progressive policy modules — that build a clear path from extractive capitalism to a regenerative, cooperative, and thriving society.

---

## 1. Background & Urgency

The global economy, despite reaching over \$100 trillion in GDP, fails to meet basic needs for billions and accelerates planetary breakdown. Rising inequality, precarious labor, and ecological overshoot are symptoms of a system optimized for profit over people and planet. A full revolutionary overhaul is politically unlikely and socially destabilizing; what's needed is a **transitional economy with direction** — a stepping stone model.

---

## 2. Vision Statement

*“A thriving world where everyone has enough, no one has too much, and the economy serves life — not the other way around.”*

The Stepping Stone Economy is a **transitional model** balancing short-term feasibility with long-term transformation. It combines wealth redistribution, cooperative enterprise, labor redesign, ecological accounting, and redefined prosperity metrics.

---

### **3. The Five Stepping Stones**

#### **Stone 1: Floor and Ceiling Economics**

- **Universal Basic Infrastructure (UBI+, healthcare, housing, food, transport)**
- **Progressive taxation with maximum wealth thresholds**
- **Land, water, and digital commons management**

##### **Policy Tools:**

- Tiered wealth tax
  - Rent control and land value taxation
  - Sovereign wealth redistribution funds
- 

#### **Stone 2: Cooperative Enterprise Transition**

- **Incentivize cooperatives and community trusts**
- **Public-interest technology development**
- **Public platforms for logistics, communication, and e-commerce**

##### **Policy Tools:**

- Tax breaks for cooperatives
  - Mandatory cooperative option on company succession
  - Public innovation funds
- 

#### **Stone 3: Time Wealth and Labor Reform**

- **Standardize a 4-day (30-hour) workweek**

- **Recognize and subsidize essential “soul work”** (caregiving, education, arts, ecology)
- **Right to Rest and Right to Purpose legislation**

**Policy Tools:**

- Overtime incentives for 4-day compliance
  - National “Soul Work” stipend
  - Timebanking networks
- 

**Stone 4: Localized Resilience with Global Justice**

- **Decentralize food, energy, and banking systems**
- **Promote regional trade zones focused on regenerative supply chains**
- **Contribute to a Global Commons Fund for planetary challenges**

**Policy Tools:**

- Local procurement mandates
  - Public investment in microgrids and agroecology
  - Climate reparations mechanism
- 

**Stone 5: New Economic Metrics**

- **Adopt Wellbeing Economy Indicators** (health, equity, ecological footprint, time use)
- **Abolish GDP as the sole success metric**
- **Require annual recalculations of economic fairness and sufficiency**

**Policy Tools:**

- Legislate “Beyond GDP” reporting
- Create independent Wellbeing & Ecological Oversight Agencies
- Tie national budgets to Wellbeing Index thresholds

**4. Implementation Roadmap (2025–2040)**

Phase	Years	Focus Areas
I. Foundation	2025–2027	UBI+, tax reform, cooperatives pilot
II. Acceleration	2028–2032	Labor law reform, ecological budgeting, Global Commons Fund
III. Maturation	2033–2040	Full implementation of new metrics, steady-state economy adaptation

**5. Stakeholder Engagement**

- **Governments:** Fiscal and legislative innovation
- **Civic Movements:** Participatory design and watchdog roles
- **Businesses:** Cooperative transition partners
- **Academia:** Research and impact evaluation
- **Media:** Narrative shift to value-based economics

## 6. Risks and Mitigations

Risk	Mitigation
Elite resistance	Public pressure + legal enforcement + transparency tools
Greenwashing	Independent ecological audits and disclosure mandates
Institutional inertia	Pilot programs + phased mandates

---

## 7. Conclusion & Call to Action

The Stepping Stone Economy is not idealistic fantasy — it is grounded transformation. Every policy is designed for immediate testing, long-term scaling, and deep systems change. We call on governments, communities, and institutions to adopt this model as the **official transition plan** out of a failing economic paradigm and into a life-honoring future.
